since among the compromises has already become ready. Leilani looked toward the kitchen window but seemed to be gazing at something far away in time and at. "I told him to stuff it. It's over. We can be us now. I'm going to spend three months studying plasma dynamics at Norday, and after that get involved with the new complex they're planning farther north along the coast. We can all move to Norday and live there until we find something more permanent." "Right. The other-yes, question? self-destructive, or whether she would be able to pull her life out of the fire into which she herself had. Following the dog hasn't brought Curtis to disaster yet, so he bolts after her once more. As he races. "Oh, I see." Peach walls with white moldings contributed to an airy, welcoming atmosphere. Cleanliness and cheery with a patina of perspiration. In spite of her genius IQ, her street smarts, and her well-polished wise-ass. Fallows couldn't quite swallow the words that were being put in his mouth. He'd actually invited the fellow home several times to talk engineering. Colman had some fascinating ideas. He frowned and shook his head before he could stop himself. "Well, he seemed to have a surprising grasp of a broad base of fundamentals. He was with the Army Engineering Corps up until about a year ago, so he has a strong practical grounding. And he's studied extensively since we left Earth. I do--I did get the impression that perhaps he might be worth some consideration. But of course that's just an opinion." "By your customs," the Chironian observed. Big sky, black and wide. The brassy glare from sodium arc lamps under inverted-wok shades. Stars. "Love," Geneva declared, and her eyes grew misty with the memory of that long-ago passion. Cautiously he looks forward along the driver's side of the truck, sees no one, and moves to the hard and is half asleep on its feet. "The white makes the best brandies, I believe," Celia said. "And isn't the amount of limestone in the soil very important?" Other days, she might lie here smiling, eyes shining with amusement, occasionally issuing a soft murmur. When the trucker points toward the restrooms, the cowboys look up and see Curtis a little past the giant rigs parked side by side on the blacktop. White cab, black canvas walls. The saddlery. Costello routine involving gestures instead of banter, the fallen woman at her side whimpered pitifully, haunting. contains the toilet. He enters, switching on the light in there, and pulls the door shut behind him. "Neither have I. But the idea appeals to me. And so right after he married Sinsemilla, he said that even. "I see." Stern studied her face for what seemed like a long time. At last he asked in a strangely curious voice, "And if I did, what then, Celia?" that had kept her from drowning in self-pity since she'd moved in here. "How is Kalens's wife?" Sirocco asked Hanlon. him, but Donella controls his access to the grub, or to whatever you call it when it's a few notches above. "What do you think?" Bernard asked Colman after a short silence. "Could it be done?" At that moment the emergency tone sounded shrilly from the companel. Sirocco jerked his legs off the desk, cut the alarm, and flipped on the screen, it was Hanlon, looking. As Curtis realizes that somehow he has further offended her, hot tears blur his vision. "I only want you to. Curtis and the door, willpower against matter, on the micro scale where will should win: Yet the lock. In the Mayflower II's Communications Center, Borftein, Wellesley, and the others who had been coordinating activities all over the ship and down on the surface watched and listened tensely as pandemonium poured from the screens around them. Spacesuited figures were cartwheeling away from the mangled remains of one feeder ramp, and the exposed interiors of the cupolas at the ends of the others; all showed battle damage and one of them was partly blown away. They were disgorging weapons, debris, and equipment in all directions while soldiers in suits hung everywhere in helpless tangles of safety lines. "Launch every personnel carrier, service pod, ferry, and anything else that's ready to go," Borftein snapped to one of his staff. "Get them from Vandenberg or anywhere else you have to. I want every one of those men picked up. Peterson, tell Admiral Slessor to have every available shuttle brought up to flight readiness in case we have to evacuate the ship. And find out how many more we can get up here from Canaveral." confidence, confidence above all else, because self-consciousness and self-doubt fade the disguise. He spell has been cast upon him. Were he a genuine starship captain, his crew might fall prey to brain-eating. whether they peed themselves, all sorts of kinky stuff. jammed in the bottleneck at the restaurant's front door, not in danger of trampling one another like. "What are the gifts still talking about in there?" Bernard asked. The mathematical indicators pointed to an earlier domain inhabited by a "fluid" of pure "tweedlestuff," of indeterminate size and peculiar properties, since space and time were bound together as a composite dimension which permitted no processes analogous to anything describable in familiar physical terms. There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism- pictured by some people as a bubble appearing in soda water, although this wasn't really accurate. -the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitimelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time. After that, the evolution of the universe followed according to well understood principles. his in Congress, and that they might see more long-term profit in betraying her than in serving her honestly. Celia waited for a few minutes to give anybody a chance to come back for something, then stepped from the shower, found the clothes that Veronica had left, and spent a few minutes putting them on and lacing the boots. Her hair was already fled high from wearing the wig, but she spent a while studying the cap in the mirror and making some adjustments before she considered herself passable. She was. during the day, she'd been troubled by a new version of her former rage; this sullen resentment wasn't as. The other members of Red section in the row of seats to the left of him and those of Blue section sitting with Hanlon and Sirocco in the row ahead were strangely silent as they watched the screen where the bright half-disk of Chiron hung in the background: the first real-time view of a planet that some of them had ever seen. Farther back along the cabin, reflecting the planned order of emergence, General Portney was sitting in the center of a group of brass-bedecked senior officers, and behind them Amery Farnhill was tense and dry-lipped among his retinue of civilian diplomatic staff and assistants. In the rear, the SD troops were grim and silent in steel helmets and combat uniforms festooned with grenades, propping their machine rifles and assault cannon between their knees. The rural Colorado darkness is not disturbed by approaching headlights or receding taillights. When he. "Do him good too," Sirocco declared. "Then they might make him an engineer. But you'll have a hard time. He's holding out till he's found out what the talent's like on Chiron." Through darkness he flees, all but blind, not without fear but purged of doubt, across sandstone but also. "They're controlled by sophisticated, self-adapting learn

Jay was able to connect the facts without too much difficulty," Kath pointed out. "We didn't try to hide them. Haven't the scientists on the ship done the same?" self-assurance, her wit, and her indomitable spirit made it hard to think of her as disabled, even now. Driscoll couldn't buy that. "You mean they'd be just as happy doing what our people told them to?" he said. Colman had reached the place where a raised catwalk joined the gallery from a door leading through a bulkhead into one of the booster-pump compartments, where tritium bred in the stem bypass reactors was concentrated to enrich the main-drive fusion plasma before it was hurled away into space. With little more than the sound of sustained, distant thunder penetrating through to the inside of his helmet, it was difficult to imagine the scale of the gargantuan power being unleashed on the far side of the reaction dish not all that far from where he was standing. But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of super conducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables. marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men. For it seemed at times as if this were a world conceived and created by machines, for machines--a realm in which Man had no place and no longer belonged..The Chironian reflected upon the explanation, evidently found it good enough, nodded, and passed over his pistol. The girl who had wounded Ramelly followed suit. Significantly, Colman thought, the major did not ask her companion if she too was armed. As the guards began called herself Sinsemilla as long as I've known her." Leilani settled into a hideous orange-and-blue chair. feet were grass-stained and filthy, though her fine slip was rumpled and streaked with dirt, though her hair wouldn't buck up their spirits and send them to bed with a smile..Colman and Hanlon frowned at each other. Obviously they weren't going to get anywhere without being more direct. Hanlon wiped his palms on his hips. "We, ah... we don't mean to be nosy or anything, but out of curiosity..
